

Account Portal

Customizable quick registration portal

The easy way for users to keep their profile information safe and current to ensure accurate delivery of notifications.

A continuing challenge facing organizations is keeping the corporate contact database up to date. Employees can change roles, responsibilities and locations frequently, making it hard to keep contact information current. Contractors, temporary workers and guests may also need to be notified, so their contact information needs to be captured and maintained. By providing an easy way for stakeholders to enter and update their own information, companies can reduce the administrative burden of collecting information and increase the accuracy of the database.

Account Portal is a customizable, Web-based portal, hosted by MIR3SM, that provides organizations with a simple, intuitive method for users to enter and maintain their profile information. It eliminates the need for integration into complicated HR and ERP back-end systems, providing an uncomplicated and straightforward mechanism for students, employees, visitors and vendors to receive important organizational information that may affect them, whether on or off the grounds of your facility.

Why choose Intelligent Notification technology?

Safety, Continuity, Efficiency and Productivity

When an impactful event happens, key personnel must be notified and response teams mobilized. Rapid, intelligent, two-way, mass communication empowers both business leaders and public agencies to mitigate disruption while ensuring safety and sharing critical information. Intelligent Notification provides a layer of awareness that helps monitor operations, alert responsible parties, and respond appropriately as a situation develops and is resolved, keeping personnel safe and your business or agency running smoothly around the clock.

Account Portal provides:

A Web-based portal to allow users to update information from any Internet-enabled computer

Customization to fit the unique needs of each organization

A secure login and authentication process that lets users manage their own passwords while complying with corporate security guidelines

Consistent formatting of data, no matter who enters it

Choice between required and non-required fields

Data validation of fields for email addresses, numbers, URL, text, etc., to reduce typographical errors

Seamless database sharing with Quick Alert

Option to require management approval for alert subscription

Able to augment corporate contact data entered through DataSync with personal contact information entered through Account Portal

Note that all features are not available in every configuration. Please contact a sales person to determine the best feature set for your organization.

MIR3: Proven technology, global reach
