

# Quick Alert

Simplified notification for the occasional user

---

**Simplified, Web-based process makes it easy for anyone, even the occasional user, to initiate notifications quickly and reliably.**

---

Unexpected interruptions can happen at any time and don't always fall into a regular workday schedule. Events like a power outage, severe storm, or possible threat need to be communicated quickly, even if a trained administrator is not available to send the notification. To prepare for such a situation, your organization needs a simplified method of initiating notifications for those who rarely send alerts.

Quick Alert provides the ideal solution with a straightforward, Web-based, single-page user interface for creating and launching notifications quickly and easily. It is designed to make it easy for someone who is unfamiliar with sending a notification to do so quickly, effectively and reliably.

## Why choose Intelligent Notification technology?

### **Safety, Continuity, Efficiency and Productivity**

When an impactful event happens, key personnel must be notified and response teams mobilized. Rapid, intelligent, two-way, mass communication empowers both business leaders and public agencies to mitigate disruption while ensuring safety and sharing critical information. Intelligent Notification provides a layer of awareness that helps monitor operations, alert responsible parties, and respond appropriately as a situation develops and is resolved, keeping personnel safe and your business or agency running smoothly around the clock.

## Quick Alert provides:

**A hosted, customizable Web-based interface** to fit the unique needs of your organization

**A single-page interface** to ensure quick notification creation and initiation for the infrequent user

**A secure login and authentication process** that lets users manage their own passwords while complying with corporate security guidelines

**Configurable data validation and required fields** that are tailored to reduce human error

**Customized help text** to guide users along the way

**Predefined call-bridge numbers users can easily access** using a unique conference code

**Ability to double-click on a recipient's name** to see other attributes about them

Note that all features are not available in every configuration. Please contact a sales person to determine the best feature set for your organization.

## MIR3: Proven technology, global reach

Founded in 1999, MIR3 is a leading developer of notification and response technology.
