

MIR3 Mobile Recipient App

The mobile consolidator for receiving important messages

Gives people on the move a way to easily receive and respond to alerts, join conference calls and be tracked to GPS locations.

The MIR3 Mobile Recipient app gives users an easy way to receive and respond to important messages sent from the Intelligent Notification platform on their smart phone. It runs on popular operating systems, so recipients can receive alerts wherever they are, using the device they already have.

When a mobile user answers an alert, their GPS location is detected and returned with their response, making it easy to locate those who may be traveling or at another location. In the case of an emergency, this can help decision makers determine who is in the path of danger, who can offer assistance, and who should be directed to safety.

The MIR3 Mobile Recipient app is ideal for travelers. It receives alerts from the Intelligent Notification platform over phone networks or over Wi-Fi, so when users don't have coverage through local providers, they'll still receive alerts. It works across all major platforms and has a simple, friendly interface to make it easy to get alerts and respond quickly, and notifications are easily stored and retrieved. To get a recipient's attention and increase the rate of response, the application's icon can be branded with your company's name and logo.

Why choose Intelligent Notification technology?

Safety, Continuity, Efficiency and Productivity

When an impactful event happens, key personnel must be notified and response teams mobilized. Rapid, intelligent, two-way, mass communication empowers both business leaders and public agencies to mitigate disruption while ensuring safety and sharing critical information. Intelligent Notification provides a layer of awareness that helps monitor operations, alert responsible parties, and respond appropriately as a situation develops and is resolved, keeping personnel safe and your business or agency running smoothly around the clock.

MIR3 Mobile Recipient lets users:

Join a conference call with one touch, eliminating the need to dial a call-in number or remember an identifier

Rejoin a conference call immediately if disconnected, as often happens on mobile phones

Respond to an alert with one touch; there's no need to key in special codes or reply by email or SMS

Automatically identify location so they can be directed to take appropriate action or take cover if in danger

Use the device they already have, regardless of operating system. The app already works with the iPhone and Droid; other platforms will follow soon

Receive and respond to alerts at no charge, unlike phone or SMS alerts

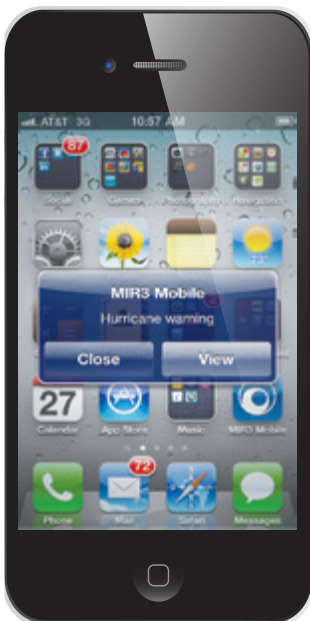

Note that all features are not available in every configuration. Please contact a sales person to determine the best feature set for your organization.

MIR3: Proven technology, global reach

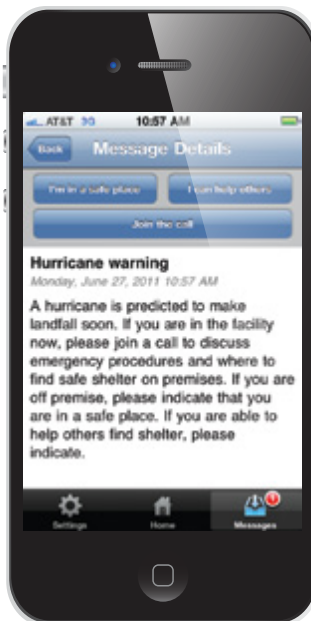

Founded in 1999, MIR3 is a leading developer of notification and response technology. The company has a history of meeting exacting customer requirements with innovative technologies that continue to set standards for the industry.
