

inAccountPortal™

Customizable Registration Portal

inAccountPortal makes it easy for users to keep their unique profile information up to date and secure.

A continuing challenge facing organizations is keeping their Intelligent Notification™ platform database up to date. By providing an easy way for stakeholders to update their own information, the organization can reduce the administrative burden of collecting and updating information while increasing the accuracy of the database.

inAccountPortal™ is a customizable, MIR3-hosted, Web-based portal that provides organizations with a simple method for users to enter and maintain their profile information within the Intelligent Notification platform. It eliminates the need for integration into complicated HR and ERP back-end systems, providing an uncomplicated and straightforward mechanism for students, employees, visitors and vendors to receive important organizational information that may affect them, whether on or off the grounds of the facility.

inAccountPortal provides:

A Web-based portal to allow users to update information from any Internet-enabled computer

Customization to fit the unique needs of each organization

A secure login and authentication process that lets users manage their own passwords while complying with corporate security guidelines

The Intelligent Notification platform includes:

- ▶ inEnterprise™
- ▶ inTechCenter™
- ▶ inAlertCenter™

Why you need Intelligent Notification

Safety, Continuity, Efficiency and Productivity

When an event happens, key personnel must be notified and response teams mobilized. Rapid, intelligent, two-way communication empowers both business leaders and public agencies to minimize disruption while ensuring safety and the flow of critical information. Intelligent Notification helps your team alert responsible parties, monitor operations, and respond appropriately as a situation develops and is resolved, keeping personnel safe and your business or agency running smoothly around the clock.

Is SaaS right for your organization?

MIR3 lets you choose what's best for your organization, whether that's an on-demand (SaaS), on-premise, or a hybrid solution. Here's why many enterprises find that Software as a Service (SaaS) is the best choice:

Lower cost of ownership

The software is hosted remotely so you don't incur the cost of installing and configuring on your own network. Upgrades happen automatically; simply log in and the new version is always available. There's no need to purchase, install or verify upgrades.

Protection against service interruptions

By having software hosted remotely, service is preserved during local power outages, natural or manmade disasters or when your own network is down.

Anytime, anywhere access

Simply log in from any Internet-connected computer using a standard Web browser—regardless of hardware configuration or operating system—to use your software.

MIR3: Proven technology, global reach

Founded in 1999, MIR3 is a leading developer of notification and response technology. The company has a history of meeting exacting customer requirements with innovative technologies that continue to set standards for the industry. MIR3 is the provider of choice for the majority of Fortune 100 firms and thousands of other organizations around the world. When you choose MIR3, you are choosing a strong company with extensively proven technology and a solid global communication infrastructure.
