FOR IMMEDIATE RELEASE

**Belkin Corporation Deploys MIR3's INlogicNOW™ Service;
Enables IT Operations with Intelligent Notification™**

San Diego – May 25, 2004 – MIR3, the technology leader in Intelligent Notification solutions, today announced that Belkin Corporation, a global provider of connectivity solutions for the computer, electronics, and mobile consumer, has selected INlogicNOW to deliver enterprise notification services across Belkin's distributed IT Operations. Belkin is utilizing INlogicNOW to notify managers and key IT employees of critical application and system errors that may threaten operational uptime and business continuity. MIR3's software and services are used throughout the main corporate enterprise to provide call centers, help desks, IT departments and Network Operations Centers (NOCs) with real-time notification and "first response" capabilities.

"Our enterprise notification requirements called for a third-party solution that reside outside our network, in order to effectively alert us of problems detected within our network," says John Adcock, Network Services Manager, Belkin Corporation. "Using the response audit and tracking capabilities within INlogicNOW, we can verify that the appropriate departmental contact(s) received an alert, and executed the necessary course of action for problem resolution."

MIR3's INlogicNOW serves as a first response notification system that connects various groups in charge of managing Belkin's critical ERP and network functions, including warehouse management, database and EDI operations – totaling more than 60,000 transactions daily. Belkin's IT Operations executes an average of three-to-five alerts per day in proactive response to systems management issues. These issues, such as file systems operating at 95 percent capacity or runaway processes, could evolve into application failures if left undetected, but often have no measurable affect when the appropriate IT group is notified and quickly responds.

Now 12 months into service deployment, Belkin plans to extend its INlogicNOW implementation beyond IT first responders to reach all company employees. Future applications will support Belkin's emergency preparedness and disaster recovery initiatives. All INlogicNOW notifications, rules, contacts and responses are managed by Belkin administrators via MIR3's web service interface.

"Belkin was among the first INlogicNOW customers to leverage Intelligent Notification to support global systems management, a trend that has gained momentum in response to the numerous, recent virus attacks and growing business concerns against cyber-terrorism," says Frank Mahdavi, CTO and VP, Corporate Development, MIR3.

MIR3's INlogicNOW is a hosted notification service that automates, prioritizes and verifies the delivery of notifications to defined groups or individuals. The INlogicNOW service is powered by redundant optical backbones to ensure service availability and performance 24/7/365. Using the INlogicAdaptor and/or Web Services API, both public and private sector users can seamlessly connect to and synchronize with proprietary systems and databases – extending existing technology investments and knowledge bases.
